To Start Northern Aerial Service

Plans are announced by the Western Canada Airways for the opening of an office in Edmonton with Lieut. C. H. Dickens, holder of the McKee trophy, as district superintendent. This move is in preparation for northern expansion and the establishment of air mail service on the prairies during the coming fall. Two of the company's planes, it is stated, will fly on regular schedule between Edmonton and points on the MacKenzie River providing service for the far northern areas where much exploration work is being carried on.

Mr. and Mrs. Swindlehurst of Kindersley arrived Monday and are located in the house vacated by E. E. Jacques. Mr. Swindlehurst has accepted the position of bookkeeper with Cooley Bros.

Contractors are this week busy digging a ditch past the elevators in order to drain the ground west of the building.

A meeting of the Laughin' "Echo" Club was held Monday evening at the home of Mrs. Gingles when a pleasant time was spent.

Miss Margaret Young has accepted a position in the office of Sheriff Adams at Hanna.

LOCAL ITEMS

Miss Julia Peyton is visiting a few days of this week in Alask.

Allan Grey, who resides south of Cereal, who had previously won the wild cow milking contest three years in succession, was awarded third place at the Calgary stampede at Monday's competition.

An important meeting of the directors of Chinook Agricultural Society and all interested in the coming fair will take place next Tuesday evening, July 16th. A particular request is made for the ladies to attend.

The annual U.F.A. convention for the provincial constituency of Acadia will take place at Oyen on Thursday, July 18th. The morning session is called for 10 a.m., and will continue in the afternoon. Premier Brownlee and other members of the house will be present. In the evening a public meeting will be addressed by the premier.

Auto and truck drivers are again reminded that they must obtain a driver's license to operate an automobile. Failure to make application may result in a fine or refusal on the part of the department. The first disregard of the regulations under the new act resulted in a conviction at Edmonton when a man was charged with driving a car while intoxicated and had his driver's license cancelled.

Freight Rates Fight to be Resumed This Fall

Victoria, B.C.—The long fight to secure a complete overhaul of British Columbia freight rates will be resumed before the privy council of Canada in September or October, according to plans discussed between members of the cabinet and Leon J. Ladner, provincial government rates counsel, last Saturday.

Rate questions will go before the privy council in the form of an appeal against the railway commission's last judgment, which granted some rate reductions to British Columbia, but not enough to satisfy the provincial authorities.

It was indicated that British Columbia's application would be along these four lines:

1. Abolition of the mountain differential.
2. Reduction of the export grain rate.
3. Reduction of the domestic grain rate.
4. Complete revision of the various rates covering the shipment of British Columbia fruit to its prairie markets.

O. L. Mielke received a telegram on Tuesday that his brother who visited here a short time ago had died at Glasgow, Montana.

Mr. and Mrs. O. Nelson returned from Calgary on Wednesday, bringing back with them Mrs. Shrigley and little son who formerly lived here and will visit Mrs. Nelson for a week or two.

Mrs Alice Short of Calgary is at present visiting at the home of Mr. and Mrs. McIntosh.

Mr. and Mrs. Lorne Proudfoot visited the Anderson Experimental Farm on Tuesday.

Mr. and Mrs. A. E. Roberts are spending a week at the home of their daughter, Mrs. Bjursvik at Collholme.

N. D. Stewart is taking in the stampede at Calgary this week.

The C.G.I.T. girls who went to camp at Gooseberry Lake returned on Wednesday with the exception of Dorothy Carter and Elsie Smith.

Albert Parker of Lethbridge arrived here on Wednesday morning and will spend his vacation with his sister, Mrs. Knibbs.

Mr. and Mrs. Ole Rudy, also their daughter-in-law, Mrs. Anderson, motored to Calgary on Wednesday for the stampede.

We are glad to report that R. R. Patton who was ill and taken to Cereal hospital has recovered.

Harry and Clifford Thorp who have been staying with their aunt, Mrs. Jacques, and attending school here for the past year, returned to Calgary on Monday.

Vincent, Lorne and Chester Rideout, Harmon Vanhook, Alan Carter and Earl Robinson are leaving for camp at Gooseberry Lake on Friday.

Peter Vanderhoof of the Acadia Hotel, who has been spending a month's vacation in the Dakotas and Minnesota, returned Thursday last.

I. H. Holden, editor of the Cereal Recorder, and A. Hughes were in Chinook this week in connection with the Chautauqua.

We are informed that some of the small boys around town are making a practice of playing pranks which should be stopped before any more serious offence is committed.

The One Hundred Percenter

Lady Astor, like Bernard Shaw, has the habit of saying startling things that make people think, says the Winnipeg Tribune. In the recent election campaign in Great Britain she struck a responsive chord in many minds when she said:

"It is the 100 per cent American and the out-and-out Englishman I fear. I think 100 per cent citizens ought to be locked up. They are a danger to the world."

Everybody knows what a 100 percenter, or an out-and-out, is. He is to be found in more or less substantial numbers in every country, although his favorite stamping ground is the North American continent. The 100 percenter may be distinguished by several well-known characteristics.

In the first place, he holds, in a great moral principle the immoral doctrine embraced by the famous motto, "May my country be always right, but my country right or wrong." This naturally scales down into "my state (or province), my city, my ward, my party"—and, not infrequently, "myself!" In essence it is placing a nation, or a locality, or a group of persons associated together for some common cause, above every ethical or moral judgment of mankind, above the sense of right or wrong.

Another sign of the 100 percenter is a steadfast belief that everything that is American, or Canadian, or English, or Italian, is right, because it is American, or Canadian, or English, or Italian. The logical consequences of such an obsession is that he cheapens his country's flag by dragging it in and flouting it on every possible occasion.

The 100 percenter is not all bad, of course. He merely fails to see that patriotism is not the cause but the result of a sound and honorable national life. He is the victim of current standardization of thought which manifests itself in slogans and headlines. Not everyone would want to go to far as Lady Astor and have him locked up. Nevertheless he is a danger because his enthusiasm is rooted mainly in mass of intolerance. And intolerance, as Lady Astor implied, is one great obstacle to civilized social progress.

And in civilized social progress lies the hope for the future peace of the world. If the American, the Canadian, the Englishman, the Italian insist upon the acceptance of their particular national views, and intolerance refuse to see any good or virtue in the views of others, what hope can there be of the nations drawing closer together?

And if the 100 per cent doctrine is sound and right, and the 100 percenter is to have his way, what hope is there for the future of many nations of today? Take Canada as an example. If the 100 per cent Easterner adheres rigidly to his views, declares he alone is right, but whether right or wrong, he will not budge from any position he has taken on fiscal or other questions, and the 100 per cent Westerner adopts the same attitude, what will be the outcome of the Canadian Confederation?

Apply the same attitude of mind in matters of race, language, religion, and government in Canada, and in each of the provinces of Canada becomes an impossibility. The 100 percenter would wreck everything if he does not have his own way.

All history proves that intolerance has been the cause of the world's greatest sorrows, the underlying cause of its bloodiest wars. Intolerance of race, intolerance of national customs, intolerance of religion, intolerance of social conditions, the 100 percenter in the ranks of employers and trade unions, these are the real dangers in the world today as they were in the years that are past.

The 100 per cent demagogue with a glib tongue and a reckless disregard for truth and fact by attracting the attention, playing upon the passions, prejudices and sentiment of those who are so swayed rather than guided by their intelligence, can undo the work of generations of statesmen, and render difficult and oftentimes impossible the work of the true reformer.

The man who boasts he is 100 per cent, this or 100 per cent, that is merely advertising the fact that he is intolerant in his views and narrow in his vision and conception of life. He may be sincere, but his sincerity is the outcome of his intolerance, and his intolerance has its foundation in ignorance and a prejudiced mind. As such he is a national danger.

To Test Air Television

Monoplane Has Been Especially Constructed To Try Out Invention

Flight tests will soon be made of television apparatus calculated by its inventor, C. Francis Jenkins, Washington physicist, to reproduce conditions as seen from an airplane, on a screen miles away.

Moving panoramas of countryside—in wartime instantaneous recording at headquarters of observations made by planes back of the enemy lines—as broadcast by the "aerial television eye," will soon be a scientific reality, he said.

Successful experiments with the

new process have already been conducted with ground models from a fixed base, he announced, and a Slinson junior cabin monoplane had been specially constructed for practical test purposes.

Will Increase Empire's Trade

U.S. Tariff Likely To Divert Trade To British Dominions

Increased United States tariff against Canadian products will divert Canada's trade more and more to the other Dominions of the British Empire, believes Norton Francis, president of the Canterbury, New Zealand, chamber of commerce, and prominent business man, who is visiting Canada and the United States for the purpose of studying relations between the farmer and city industry on this continent.

In an interview at Winnipeg, Mr. Francis said he does not think Canada can meet the tariff situation by further raising her own tariff scale, but should concentrate on increasing her manufacturing and inter-empire trade.

The moisture evaporated from a single white oak in a day has been estimated to be 150 gallons of water.

Can Measure Laughter

Machine Determines Whether Comedy Piece Is Success Or Failure

"John James, comedian, Lafograph 89," may be the form of card used by entertainers in the future, for a new apparatus has been invented to register the exact "strength" of the laughter aroused by a comic piece in a theatre or concert hall. It registers the truth and nothing but the truth. The machine will presumably have a figure to denote absolute efficiency, and should a musical comedy fail to come up to scratch it will no longer be possible to suspect that the failure was due to the critics. Also the critic's work will be made easier: instead of praising an author's wit, or discussing a comedian's qualities, it will be necessary only to say at the end: "Lafograph 100, or 50, or 0," as the case may be. After a first night the public will be able to see the registered rise and fall of the needle—how it began at "itter" rose to the middle sphere of "chuckles" and "laugh," leapt to the higher "outburst" or "scream," or reached the supreme heights of "screetch."

PAINS IN THE BACK

These Are Usually Due To a Weakened Condition Of the Blood

The muscles of the back are constantly in a state of strain and little rest throughout the day. They are therefore in need of all the nourishment and strength that plenty of pure red blood can give them. Unless they have this help, you will have backache and continue to have it.

Backache seldom or never means kidney trouble. It is nothing more than the tired, wornout muscles of the back showing their exhaustion after a day's work of hard work and blood. The one generally recognized efficient blood builder is Dr. Williams' Pink Pills. When the blood has been improved through the use of this, the muscle backache disappears. Miss F. Fairthorne Jones, Oshawa, tells what Dr. Williams' Pink Pills did for her in a case of this kind. She says—"I suffered for nearly three years with a weak back. At first I had to walk half doubled over. I had tried several doctors with very little benefit. A friend urged me to try Dr. Williams' Pink Pills. I did so, and the joy of once more being able to stand upright without fearing intense pain. After using two boxes there was no doubt they were helping me. I used eight boxes in all and have not since had a sign of the backache again. I can buy the pills and not feel tired and worn out as formerly. For all this I thank Dr. Williams' Pink Pills."

If your dealer does not keep these pills you can get them by mail at a box from Dr. Williams' Medicine Co., Brockville, Ont.

Free Advertising

The firm of Golomon and O'Gullavan had plots for sale in a suburb. O'Gullavan — young, enthusiastic, was writing the advertisement. He urged impending purchasers to seize the passing moment.

"Napoleon," he wrote, "not only met opportunity; he created it!"

Mr. Golomon read this line in the advertisement slowly and carefully. "This fellow Napoleon," he said—"what's the use of advertising him with our money?"

Powerful Medicine. — The healing properties in six essential oils are concentrated in this unique formula. Elixer Oil, forming one of the most beneficial liniments ever offered to the use of man. Many can testify to its power in alleviating pain. No man can now certify that they have the heart to sell its wonderful power is not expressed by the small price at which it sells.

Agricultural Machinery Sales

Agricultural machinery sales in Saskatchewan, which approximate \$50,000,000 annually, are increasing each year, owing to the volume of wheat and other grains produced, according to a departmental report.

Her Little Boy Was Very Ill With Summer Complaint

Mrs. Ray Fisher, Lebret, Sask., writes: "For over a month, last summer, my little boy was sick with a summer complaint. After a while there began to be traces of blood in his stool, and anything he ate would not stay on his stomach very long. He became so weak he could not stand up. A neighbor recommended

"D's o u r a g e d and in despair I sent for a bottle, not expecting any more benefit than from the many other medicines I had used, but to my surprise he began to get well again after he had taken a few doses, and before the bottle was half used he was the same happy, healthy boy he was before he took sick."

Important Move Made By Labor Government

Would Have Dominions Agree On Signing of Optional Clause Of World Court Statutes

Important negotiations affecting Empire affairs, are reported to have been initiated by the new Labor Government of Great Britain. It has communicated with all the Dominions in an effort to gain agreement on the signing of the optional clause of the word court statutes, under which questions of international law would be submitted to the permanent court of international justice, at the Hague.

The Labor newspaper, the Daily Herald, said also that the Labor Government has informed the Dominion governments that it proposes to resume diplomatic relations with Russia.

The world court matter requires agreement of all the Dominions, and it is expected this can be secured without much trouble. Australia, hitherto, was probably the only Dominion reluctant to sign the optional clause, and it is understood this reluctance has now been removed to a great extent. In any event, Premier Ramsay MacDonald is hopeful of being able to show complete Empire agreement on joining the world court when he visits the League Assembly, at Geneva, in September.

So far as Russia is concerned, the Labor Government is pledged to renewal of diplomatic negotiations, this being a necessary and important step towards the desired increase in British trade with the Soviet Union.

Search For Oil In Manitoba

Western Oil Fields Are Gradually Extending Eastward

The search for oil in the western provinces is gradually extending into Manitoba, and announcement is made of the formation of a syndicate of eastern capitalists to drill in the Ochre River field. The new organization, which is called the Carter Oil Syndicate, has taken over the holdings of 1,300 acres south of the Ochre River.

Minard's Liniment for Earache.

Official Criticism

The Movie Manager—Good morning, matin. I asked you to call because I wanted your opinion on some of my features.

The New Censor—Well, to begin with, your forehead is too low, your eyes are not mates, your nose is too big and bulbous, your mouth is too large and fleshy, and you've little or no brain. Otherwise they will do very well. Is that all?

Drives Asthma Like Magic. The immediate help from Dr. J. D. Kellogg's Asthma Remedy seems like magic. Nevertheless it is only a natural product. The smoke or vapor, reaching the most remote passage of the affected tubes, brushes aside the trouble and opens a way for fresh air to enter. It is sold by dealers throughout the land.

Large Purchase Of Sheep

The first 10,000 sheep for the Manitoba Livestock Credit Company have been purchased. These consist of 7,000 Rambouillet and 3,000 Oxford cross. Representative boards are being established at the larger country points in the province.

No man or woman should bubble particularly about because of corns when so certain a relief is at hand as Holloway's Corn Remover.

Oldest Wine In World

The oldest wine in the world is on exhibition at Speyer, Germany. It is Roman wine, recently dug up, and is estimated to be 1,600 years old. It is partly solidified, for Romans put honey in their wine.

Keep Minard's Liniment in the Medicine chest.

Famous Detective Retires

Scotland Yard Officer Was Successful In Solving Many Celebrated Cases

Retirement of Frederick Wensley, 64, as chief of the Intelligence division of Scotland Yard, has brought to an end a career which began in the Limehouse district and resulted in the solution of numerous murder and other mysteries. He came to know every nook in Chinatown and the East End, the anarchists' haunts and dens of iniquity. With hawklike features, piercing eyes and bushy eyebrows, Wensley resembles Lord Reading, and really looks the part that novelists have assigned the detective. In real life his work often shamed the amateur exploits of his prototypes in fiction. Most of his murder mysteries were solved as he sat back in a big armchair in Scotland Yard Building. He would sit for hours staring at the river while studying every angle of the case, and when he left that chair, things began to happen.

Back in 1888, Wensley took part in the famous Whitechapel hunt for "Jack the Ripper," who murdered many young girls. He shared in the Sidney Street siege when a group of murderers barricaded themselves in a house and fought a battle with the Scots Guards.

One of his most famous exploits was the case of the mystery house where he found that Malby, the tailor, had been living for weeks behind barricaded doors, alone with the bodies of the women he had killed.

One of his most astute solutions was in the murder of Madame Gerald, which he solved with only two clues to work on, a laundry mark and a piece of paper with the cryptic words "blonde Belgium."

Most of his cases were sordid murders which were not sensational but which required much skill to solve.

Excellent For Croupy Children. — When a child is suffering with croup a good plan is to use Dr. Thomas' Elixer Oil. It relieves the irritation and lessens the phlegm giving speedy relief to the little sufferer. It is equally reliable for sore throat and chest, earache, rheumatoic conditions, etc. — Dr. Thomas' Elixer Oil is regarded by many thousands as an indispensable of the family medicine chest.

Britain's Oldest House

The oldest inhabited residence in the kingdom is said to be Dunvegan Castle, in the Isle of Skye. Part of it dates from the ninth century, or a couple of hundred years before the conquest of England by William the Norman.

The cheapness of Mother Graves' Worm Exterminator puts it within reach of all, and it can be got at any druggist's.

Could Qualify
"I won't disguise the fact that this job is a tough proposition. The man who gets it will have some ugly customers to deal with."

"Then it will suit me down to the ground. I've had lots of experience with ugly customers."

"Where?"

"In a beauty shop."

It May Be Urgent**When your Children Cry for It**

Castoria is a comfort when Baby is fretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. It is a safe, gentle, non-toxic remedy, meant for babies. Perfectly safe to give the youngest infant; you have the doctor's word for that. It is a vegetable product and you cannot imagine that Castoria means most. Some night when constipation must be relieved—cold palms—or other suffering. Never be without it; unopened, it will keep an extra week, unopened, to make sure there will always be Castoria in the house. It is effective for older children, too; read the book that comes with it.

Fletcher's CASTORIA**Took Air Trip Alone**

English Farmer, Sixty-Seven, Flies To Holland and Back

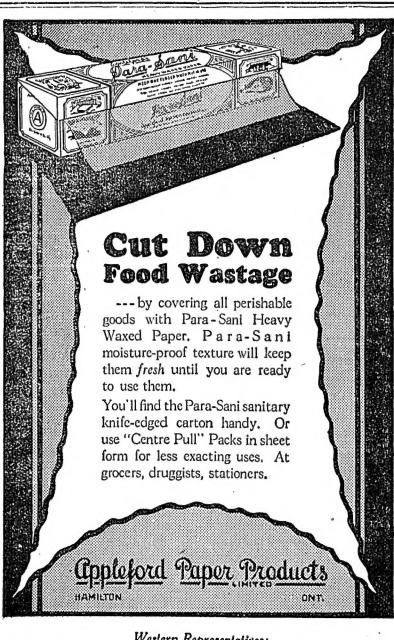

Richardson, 67, Britain's so-called oldest aviator, made a lone flight from Norwich to Rotterdam, Holland, and back.

He scolded the dissuading pleas of his fellow airmen, saying: "Don't take me up to heaven! It doesn't take much courage to fly over the sea."

Richardson learned to fly two years ago because, having given up farming, he had nothing else to do."

Importance Of Tourist Trade As An Economic Factor In Canada Continues To Increase

The importance of the tourist trade as an economic factor in Canada continues to increase and is being recognized to a greater extent than ever by all classes of the community. Fresh interest has been stimulated in the subject by the recent publication of estimates by the Dominion Government placing the expenditures of tourists from other countries in this Dominion at \$20,501,000. It is predicted freely that when the totals for 1929 come to be written up they will be well in excess of the \$30,000,000 mark. The fact, moreover, that the expenditures of tourists from other countries in Canada amounted to \$256,501,000 in 1928, while those of Canadian tourists abroad amounted to \$103,215,000, thereby leaving a substantial credit balance of trade, is satisfactory, but when this worked down to a per capita basis it will be seen that Canadians spend far more in proportion abroad than do foreigners here.

For instance, the figures for the United States alone, these show that while American tourists spend some \$20,000,000, or about \$2.40 per capita here, Canadians spend \$75,000,000, or \$7.50 per capita, across the line. It is evident, therefore, that on a per capita basis we are not getting as large a share of the American tourist trade as we should. This will probably be corrected as the attractions of Canada become better known.

Commenting on the situation, the government statistician says that Canada's great natural assets, her pictureque scenery, the diversity of lake, forest, and river, the many large districts still remaining in their natural state, the healthful and invigorating climate, the charm of the Canadian winter and its distinctive sports, the old world lure of French Canada, attract tourists in increasing numbers. The presence on our southern border of the United States, with its dense population possessing in a high degree the leisure and means to travel, the ease of communication between the two countries, the large automobile population, the relative cheapness of an automobile holiday in Canada for the average American family, and the close interlocking of business interests between the two countries result in a very large travel over the border. Canadians, too, are attracted by the larger United States cities with their theatres, museums, etc., and the more "settled" scenery, while large numbers of well-to-do Canadians visit United States' winter playgrounds in the south.

That Canadians realize the economic importance of this traffic is evidenced by the large sums spent on highway construction and advertising, and by the good accommodation provided by hotels, tourist homes and camps. In addition to the direct value of the expenditure of tourists, there follows the wider diffusion of knowledge of Canada's resources and increasing investment in them.

At the same time it is evident that many Canadians do not realize the beauties of their own country. How many people in Ontario, for instance, realize the beauty of the lower St. Lawrence and the Maritime Provinces, where they can enjoy not only entrancing natural scenery but also the salt sea breezes from the Gulf of St. Lawrence or the Atlantic. At the same time the people who live in these regions know little or nothing of the delights of Muskoka or Timagami, or the Georgian Bay, while both are largely ignorant of the pleasure which may be had in the Rockies or at the Pacific coast, or at the pretty resorts in the Prairie Provinces. A greater realization

W. N. U. 1793

of the pleasures that are to be had at home will not only help to keep Canadian money here and enable Canadians to place before citizens of other lands the joys of a stay of shorter or greater length in the pleasure grounds of the great Dominion. In other words, many Canadians do not know their own country.

Dominion Government placing the expenditures of tourists from other countries in this Dominion at \$20,501,000. It is predicted freely

that when the totals for 1929 come to be written up they will be well in excess of the \$30,000,000 mark. The fact, moreover, that the expenditures of tourists from other countries in Canada amounted to \$256,501,000 in 1928, while those of Canadian tourists abroad amounted to \$103,215,000, thereby leaving a substantial credit balance of trade, is satisfactory, but when this worked down to a per capita basis it will be seen that Canadians spend far more in proportion abroad than do foreigners here.

Grades For Strawberries

Fruit Commissioner Has Worked Out Recommended Grades For Berries

The marketing of all kinds of produce is materially helped when properly graded. The fruit commissioner of the Department of Agriculture at Ottawa, has offered recommended grades for strawberries. First of all, it is recommended that the fruit be divided into No. 1, No. 1 canning, and No. 1 for jam. The specifications for No. 1 strawberries calls for fruit with the calyx and a short stem attached, which are well formed, of good colour, firm, but not overripe, free from surface moisture, bruises, bird pecks, mould, and from damage caused by sand, diseases or other means. The minimum diameter for this grade is three-quarters of an inch, measured from side to side.

No. 1 canning strawberries are recommended to consist of field run fruit, clean, sound, ripe, firm, and of uniform size, of good colour and free from malformed or monkey-faced berries.

The specifications for No. 1 jam strawberries call for field run fruit, clean, ripe, and of good colour, free from malformed or monkey-faced.

In order to allow for variations incident to careful commercial grading and handling, an allowance of five per cent under the prescribed size and five per cent. by volume may fall below the remaining requirements of the grade.

Farm Relief In Canada

Railroads Are Doing Their Share In Practical Way

Canadian railways haul grain at rates that would bankrupt American roads. From Devil's Lake, N.D., to Dubuque, a distance of 324 miles the rate is 19.5 cents. From Lydiatt, Man., to Fort William, a distance of 339 miles, the rate is 14 cents. The saving is over 20 per cent.

From Estuary, Sask., to Fort Williams the rate is 24 cents. The distance is 1,030 miles. From Bozeman, Mont., to Durah, the rate is 42 cents. The distance is 1,033 miles. The Canadian farmer saves 40 per cent. Similar savings are in effect on the westerly route.

Canadian railroads are giving their farm customers practical farm relief.

Adopted By All Provinces

The province of Alberta has adopted Old Age Pensions, the funds for which are provided by co-operation between the Federal and Provincial Governments. The scheme has now been adopted by all Canadian provinces from the Quebec boundary westward.

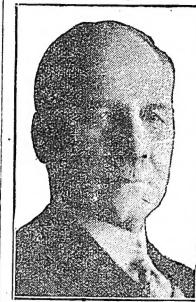

Canadians Taking To Air

In 1926 there were 6,000 passengers carried in Canada by air. In 1928 the number was 47,000. Over a quarter of a million miles of territory has been mapped by Canadian airmen.

Kilm burned brick made by the Babylonians 6,000 years ago still exist.

God help the middle class. The poor can beg and the rich can steal.

Heads New Organization

C. W. Bowman, President of the Colonization Finance Corporation of Canada Ltd., and Chairman of the Mutual Life Assurance Company, Waterloo, Ontario.

The Colonization Finance Corporation is a new organization consisting of certain large Canadian land-owning companies who have allied themselves with the Canadian Colonization Association to assist and expedite sound settlement measures.

British Columbia Show Herds

Three Different Breeds Of Dairy Cattle For Western Fairs

According to present arrangements British Columbians will have three show herds, representing three different breeds of dairy cattle on the prairie. Class "A" fair circuit, this year. David Spencer, Ltd., will for the third successive season send a Jersey herd, while the Consolidated Mining and Smelting Company of Trail, will attempt to repeat last year's successes with Ayrshires. British Columbian Guernseys will for the second time be competitors for honors with the herd of Allister Forbes, Cobble Hill, Vancouver Island, and this year will include Regia, Fair, which has added Guernsey classifications to its prize list.

Boys' and Girls' Swine Clubs

C.P.R. Again Offering Four Cups For Competition In Western Provinces

J. M. McKay, general agricultural agent of the Canadian Pacific Railway in Winnipeg, Man., announces the intention of the company to again offer four cups to the Boys' and Girls' Swine Clubs located along the railway's lines in each of the four western provinces. In addition the winning teams in each province will be taken to Toronto, to the Royal Winter Fair as guests of the railway.

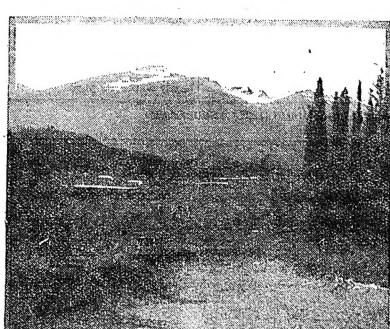

"Is that a popular song he is singing?"

"It was before he began to sing it."

At the end of the eighteenth century men were using cast iron to build bridges.

God help the middle class. The poor can beg and the rich can steal.

LOTS OF TROUBLE

No. 10, The Maze—485 yards, Par 5.

They've got to be straight to negotiate the tenth hole of the Jasper Park Lodge Golf Course, Jasper National Park, Alberta, over which the Canadian and Western Canada Amateur Championships will be played Aug. 19-24, this summer. Immediately in front of the tee is a water-hole and then it's a case of from bunker to bunker.

The hole from No. 1 (championship) tee is seen at the top and below is the hole in detail with yardages to scale underneath the panel.

Inter-Imperial Trade Idea Meets With Heartiest Response Throughout British Empire

Potatoes Good Feed For Dairy Cattle

Value Nearly Equals Corn Silage Pound for Pound

According to A. E. Perkins, of the Ohio Agricultural Experiment Station, potatoes have a feed value nearly equal pound for pound to corn silage. This is useful information as it gives the farmer a market for his culls and any others not finding a market.

The dry-matter content of potatoes is on the average 21 per cent, as compared to 28 per cent. for silage. But as the dry matter of the potato is more digestible than that of silage the digestible amount of digestible ingredients is the same. The dry matter of potatoes is mostly starch although it also contains about 1 per cent. digestible protein. The big cry against potatoes is that they give off an odor flavor to the milk. But this is not due to the potato itself around the stable. Therefore if the cows are not fed until after milking, and care is taken to see that there is no potato odor lingering around the barn during milking, the cream, milk and butter should not be tainted. No ordinary treatment such as pasturization will remove potato flavor from the milk once it is absorbed.

The potatoes are fed raw at the rate of 20 to 30 pounds daily in place of silage. Potatoes must be cut or sliced in order to prevent chocking. Care must be taken to see that no green potatoes or potato sprouts are fed as they contain a deadly poison called solanine.

Danger From Lightning

Nine-Tenths Of Casualties Said To Occur In Rural Districts

The United States Bureau of Standards, which has been making an investigation of the hazard of lightning, has found that 500 persons are killed annually by lightning in the United States and upwards of 1,300 injured, and that nine-tenths of the casualties occur in rural districts. The board has drawn up the following code of safeguards:

(A)—Do not go out of doors or remain out during thunderstorms unless it is necessary. Stay inside of a building where it is dry, preferably away from fireplaces, stoves and other metal objects.

(B)—If there is any choice of shelter, choose in the following order: 1. Large metal or metal-frame buildings; 2. dwellings or other buildings which are protected against lightning; 3. large unprotected buildings; 4. small unprotected buildings.

(C)—If remaining out of doors is unavoidable, keep away from: 1. Small sheds and shelter if an exposed location; 2. isolated trees; 3. wire fences; 4. hill tops and wide open spaces.

(D)—Seek shelter in dense woods, a grove of trees, a cave, a depression in the ground, a deep valley or canyon.

A Heavy Loss

The star actress of the touring company rushed into the manager's room.

"My jewels," she sobbed. "They're lost . . . or perhaps stolen . . . I can't find them anywhere."

"Which jewels?" asked the manager, curiously.

"The ones I wear in the second act," the actress explained, brokenly. "The diamond tiara, the emerald bracelet, and the diamond anklet."

"Well, Miss Smith," said the manager, severely, "I hold you responsible for those articles. I'm sorry, but I'll have to dock you seven-and-a-half on Friday."

Making a Fisherman's Paradise

Maligne Lake, the largest glacial fed lake in the world, situated in Jasper National Park, Alberta, last year was stocked, as a government experiment, with fingerlings hatched from some 250,000 imported trout eggs. This year the fish are from five to six inches long, are thriving on insects and are quite at home in their new habitation. This spring 230,000 more fingerlings were added to last year's batch.

At three cents a mile a journey to the sun cost \$2,700.00.

The Atlantic coast line of the U.S. is 5,560 miles long.

The blood absorbs about two pounds of oxygen daily.

The proposals of James A. Robb, Canadian Finance Minister, in connection with inter-imperial trade and the suggestion of an Imperial conference on Empire trade and tariffs continue to be discussed with the liveliest interest throughout the British Empire.

British newspapers are appealing to the government to respond heartily to the Canadian suggestion, but there has been no move yet.

The Financial Times, in a long editorial, enthusiastically supports Mr. Robb's ideas.

"Meanwhile," continues the Times, "the present provides an excellent opportunity for co-operation in industrial development among the dominions themselves. With their magnificent and seemingly boundless resources and unrivaled facilities for the generation of cheap electric power, Canada offers probably the most attractive field in the world today for British capital and enterprise."

The Times calls attention to Canada's development as a manufacturing country and appeals for the co-operation of British labor and capital in this development.

Mr. Robb's proposals have called attention publicly to Canada's important part in the trade of the empire. In this connection many Canadian products advertised by the Dominion government in their sales agency Australia, New Zealand and South African products are advertised throughout the country by the respective governments of those countries.

There see no reason why Canadian apples should not have the same publicity as Australian apples, which in the press and on billboards confront the Englishman at every turn.

Railway For Languages

Leeds Railway Worker Has Mastered Twenty Since War

Mr. Harry Robinson, a Leeds railway worker, is master of twenty-two languages. He can speak English, French, Italian, Russian, German, Spanish, and Danish. He can read and write Greek, Dutch, Persian, Esperanto, Swedish, Portuguese, Bulgarian, Chinese, Hindustani, Arabic, Turkish, Latin, Norwegian, Russian, Serbian, and Japanese. Previous to the war he knew only English and Latin, then he found a French novel in a railway carriage, and mastered it with the aid of a dictionary. All his study has been done in his spare time since then.

Hard Luck Pursues Her

In Birmingham, England, according to "Time, the News Magazine," Madge Cunner, governess, complained last week that her first fiance, a war-time officer, was killed by a rifle grenade; her second, an aviator, fell to death three days before the wedding; her third, an engineer, was struck by a crane and died; her fourth died two days before the marriage.

Beat Him To It

The bus was crossing Westminster Bridge.

"Say, conductor," said the American, "what do you call this stream here?"

Hastily the conductor looked over the side.

"Darn it!" he said. "The radiator must have sprung a leak again."

The Bore: "Anything I say goes?"

The Bored: "Well, say your name once or twice!"

"How are things with you?"

"Couldn't be better. My wife has eloped, my mother-in-law is dying, and I have just won the big lottery."

—Moustique, Charleroi.

WORLD HAPPENINGS BRIEFLY TOLD

Sir Belby Alston, British ambassador to Brazil since 1925, died suddenly in a London hotel, aged 60 years.

Sheep from the famous flocks of His Majesty King George are being imported on Vancouver Island and will be pastured in the Sooke Hills.

Two cargoes of Canadian grain have left Vancouver for Vladivostok. This is the first movement of this commodity to a western Siberian port in years. It is expected that a further cargo will go forward shortly.

London morning papers say the much-talked-of agreement between British and German film groups had been signed with involved capital amounting to approximately 60 million pounds sterling, or \$300,000,000.

Marius Polon, one of the most noted military test pilots in France, was killed instantly when his plane crashed because of a broken wing. His parachute failed him after the pilot had leaped from the plane.

A cauldron of grease, which overturned and ignited in the main gallery of the Hamburg-American liner "Deutschland" furnished a stirring finish to an uneventful Atlantic crossing for 380 passengers.

Exporting trade in the New Westminster area is seen in the recent shipment of a large consignment of rope from the factory at New Westminster and canned milk from the Fraser Valley to the British West Indies market.

A Chinese-British agreement has been signed providing for the training of Chinese naval cadets in Great Britain and to the furnishing to the Chinese government of a British naval mission in development of the Chinese army.

Bulman's Limited, of Vernon, B.C., has started construction of its new dehydrating plant and it is expected that the factory will be completed in time to handle the coming season's crop. Machinery is already moving in.

A shipment of purchased cattle consisting of 25 head of Guernseys purchased in Wisconsin and Illinois, by D. V. Runkle, of Regina, have been placed on the Pilot Butte stock farms near Regina. The shipment is valued at \$10,000.

Has Gained Popularity

Essay Contest Teaching Toledo School Children Facts About Canada

A Canadian essay contest in the Toledo, Ohio, schools, sponsored by Edmund G. Odette, M.P., for East Essex, has gained such popularity in that city that one of the newspapers now is carrying a daily feature entitled "Facts About Canada."

"Canada," one of the Toledo papers pointed out, "is a nation of home-owners in the farming district, 78 per cent of the people owning their own homes."

Other facts listed from day to day, deal with Canada's natural resources, its hydro power, its fishing and its industrial enterprises.

The competition among the Toledo school children was started last fall when Mr. Odette, addressing the North Toledo Improvement Association, offered to pay the expenses of a trip to Ottawa for the author of the best essay on "Canada."

The proposal received such a favorable impression in Toledo, that the chamber of commerce there offered to do likewise for a second student. The object of the essay contest and the trip, is to promote a better understanding between the people of the adjoining countries.

If all oyster eggs hatched and survived, in five generations their shells would make a pile twice the size of the earth.

THE SOUNDING FILM.

Producer: "Jump!"
Actor: "But I see no mat!"
Producer: "Of course, not. This is a sounding film. We have to reproduce your thud on the pavement!"—II 420, Florence.

A Pleasing Incident

Deaf and Dumb Children Are Entertained To a Lecture

This pleasing and pathetic little incident took place in Montreal recently—at the largest health exhibit ever shown in Canada, when the Canadian Social Hygiene Council assisted the Montreal Federation of French Health Agencies in a financial drive.

Morning, afternoon, and evening, health lectures were given, thousands of school children being carried free on the street cars. And one day they brought all the little deaf and dumb children in Montreal.

They gathered that silent company in the big lecture hall, and placed them in little groups of fifteen or so, around lady teachers. Each teacher faced the lecturer, and the children solemnly looked at their teachers. And then the lecturer began to speak to the children, while they stood, unhearing, and watched their teachers.

He spoke only a few sentences, and stopped. And all the teachers began to move their fingers, translating the lecture. The children's eyes followed eagerly as they understood the words that were being relayed to them, their own native language that they could not understand until it was translated into motion.

Children are notably fidgety at lectures, but not so these youngsters, to see how they enjoyed every minute of it was enough to bring tears to many eyes that watched them. They were being brought into close touch with the world of their voiced playmates; their partial isolation was being temporarily broken down. To each of them, that lecture was a big event.

Recipes For This Week

(By Betty Barclay)

GOLDEN ORANGE FROSTING

Grated rind 1 orange,
3 tablespoons orange juice.
1 teaspoon lemon juice.
Yolk of 1 egg.

Confectioners' sugar.

Mix grated orange rind with fruit juices and let stand 15 minutes. Strain into beaten egg yolks and add enough sifted confectioners' sugar to spread.

HAMBURGER EN CASSEROLE

2 lbs. of round steak ground
or
2 lbs. of lean hamburger.
2 large onions.
2 large peppers, green or red.
1 large lemon.
1 8 oz. bottle tomato catsup.
1/2 lb. or more of bacon according
to taste.
Salt and pepper.

Butter your casserole dish or pan and lay about 1/2 inches of hamburger in bottom.

1 layer of one onion thinly sliced;
1 layer of one pepper thinly sliced.

Juice of half lemon.
Salt and pepper to taste.

Repeat until the meat is used, making the second layer of meat about one inch thick, this will give enough hamburger left for about 1/2 inch thick on very top. Pour a whole bottle (8 oz.) of catsup over and strips of bacon. Bake slowly or in modern oven for one hour and a quarter.

Early oil wells at Baku were scraped out by hand.

PREMIER FERGUSON CHRISTENS AEROPLANE

COL. CHAS. LINDBERGH AND HIS BRIDE

Photograph shows Colonel Charles Lindbergh and his bride, formerly Miss Anne Morrow, daughter of D. W. Morrow, United States ambassador to Mexico, at Mitchell Field, L.I., where they witnessed the first flight in Daniel Guttenheim safe-air-craft competition. This is their first appearance since their marriage on May 27. Col. Lindbergh is a trustee and consultant of the Daniel Guttenheim Fund for the promotion of aeronautics.—Copyright, 1929, Pacific and Atlantic Photos, Inc.

Out Of Their Element

Eskimo Boys Cannot Stand Climate
Of Eastern Canada

Ben Ell, nine-year-old son of Chief Ben Ell, head of the Southampton Island Eskimos, and Sam Puffut, who have been endeavoring to learn the ways of civilization at Lakefield preparatory school, near Peterboro, Ont., have been forced to give up their studies there and hurry home on account of illness.

Ben and Sam soon became favorites at the Lakefield school where they have been for two years, but just before Christmas both were forced to relinquish their studies to face an ordeal of sickness. Influenza, pneumonia, measles, tonsillitis and operations for mastoids and adenoids proved too grueling a test for little Eskimo constitutions and it has been decided to send them back to their northern home.

Bravely Not

In a small country town they were discussing the question of a brighter Sunday.

Various proposals were put forward, and some daring soul suggested a Pleasant Sunday Afternoon.

A dignified old lady rose in the meeting and said: "There will be no pleasant Sunday afternoon when I am."

Rushes For Homesteads

Homesteads are being filed on at the rate of 100 a week in the Edmonton Land Office.

To Study Oriental Trade

Graduate Of University Of B.C. Has Gone To Japan

Possessor of a \$1,000 scholarship for the study of Oriental North American trade conditions, Howard Nichols, Vancouver, 20-year-old University of British Columbia graduate, sailed recently for Yokohama.

The scholarship is the first of three granted for the promotion of knowledge in Canada of Oriental trade by H. R. Macmillan, Vancouver lumber exporter. It provides \$1,000 for one year, free expenses and transportation between Vancouver and the Orient. It is open to all University of British Columbia students who prove themselves in the study of economics.

Hundred Million Sheep

Australia owns 100,000,000 sheep, which, although less than one-seventh of the world's flocks, produce annually nearly one-third of the world's wool. It is estimated that 80,000 families in Australia own sheep.

Figure It Out

"Which is the most valuable — a golden sovereign or a £1 note?"

"The note, because when you put it in your pocket, you can double it."

"Quite right. And when you take it out you find it increases."

If the city of Duluth, Minn., were moved to Nevada, the state would nearly double its population.

SUNDAY SCHOOL LESSON

JULY 14

EZEKIEL TEACHES PERSONAL RESPONSIBILITY

Golden Text: "Each one of us shall give account of himself to God."—Romans 14:12.

Lesson: Ezekiel 18:1-32; 33:1-20. Devotional Reading: Psalm 125.

Explanations and Comments

The Prophet's Responsibility, verses 7-9—Ezekiel is set as a watchman unto the house of Israel. He must hear the word of Jehovah and he must proclaim it; for as a watchman he is responsible for warning the people of the consequences of sin. He must know that God punishes wickedness, and he must warn the wicked from his way. If he fails in his duty of warning and rebuking, he is guilty. The prophet is "loose" guilty. If, however, the prophet warns the man and the man fails to heed him, the prophet has "delivered his soul"; he is free from guilt. The minister, however, is responsible, not of producing obedience, but of uttering the warning. Recall how Paul declared to the elders of Ephesus that he shrank not from declaring unto any man his opinion, though it might be disagreeable, and taught them publicly, and from house to house, testifying both to Jews and to Greeks regarding toward God; wherefore he testified unto them, "I have not shrinked from giving up my blood for the sake of the gospel, nor have I denied any man his rights."—Acts 20:17-31?

"No one is free from the danger of taking spiritual obligations too seriously. No one is perfect at all times; all are committed to us 'the word of reconciliation.' We are put in trust with a gospel which is intimately connected with the destinies of man. It is within our power to proclaim the word which makes an eternal difference to those who hear them; and upon our faithfulness may depend their opportunity of realizing the only way of escape and safety. And yet we are apt to be satisfied with something much less passionate than the service of a true watchman!"

J. Stuart Holden.

Heating By Radio

Centralized Stoves No More Attractive Than Sending Music Around World

While some, perhaps many, of the wonders prophesied for days to come may be far-fetched and foisted on a gullible public, all the amazing triumphs of the modern age were once in a similar case. Had anyone foretold the coming of radio not so long ago, ridicule would have been his portion. So the telephone "was a mirage in its day, and the typewriter had to fight its way into universal use. Who could have foreseen the place the automobile was destined to occupy from its first examples or induced people to believe that white coal could be harnessed for the service of mankind. Now we are told that radio will bring light and power to our homes and industries and provide heat as well. Centralized stoves are no more impossible than sending music round the world without visible agency.

Just one stove for the entire city and that raised 1,000 feet in the air, is the possibility announced by Paris, France. The scheme entails the establishment of wireless energy to be sent from the top of the Eiffel Tower. In each house there would be set, up machine, like, yet unlike a radio, that would intercept the waves, transform them into heat and become a radiator to warm the rooms. The proposed waves would be of 400 to 500 watts in waves of two to three meters' length. All that is needed is to place on the receiving posts a filament that the wireless flow will raise to incandescence, and you will have your stove unit. Given enough such filament units and you have your heating or cooking stove minus coal, oil, gas or wired electricity.

Sale Of School Lands

Great Interest Shown In This Year's Auction Sales Held In West

Unprecedented interest was manifested in this year's auction sales of reserve school lands in Saskatchewan and Alberta. Attendance at the various points where sales were held was high, and reached 1,000 at some points. Many farmers acquired additional land adjoining their present holdings for the purpose of extending their operations, or to make provision for their sons. Many of the buyers of these lands were "new Canadians" who have prospered in western Canada.

In all, some 738,000 acres of land were sold, for a total of \$10,192,829. Prices paid ranged all the way from \$8 to \$70 an acre. In Saskatchewan, 4,662 parcels were sold, the average price being \$12.81 per acre, and in Alberta 69 parcels, the average price being \$13.53 per acre. Two of the heaviest sales were at Assinibina, Sask., where \$1,400,000 was realized, and at Rosetown, Sask., where \$1,210,000 was taken.

Grandmother Says

"That when she was a wee, tiny baby and her mamma did not have enough milk to nurse her, she gave her Eagle Brand Milk, which made her strong and healthy, and now my mamma is giving me Eagle Brand, and I have gained over half a pound a week since I was three months old."

The high quality, uniformity and economy of Eagle Brand make it the first choice for cooking and table use.

If your baby is not gaining in weight as it should—if it cries or is fretty or restless—something must be the matter with it.

In this paper from time to time you will find an advertisement of Eagle Brand Milk, a food that has raised more healthy babies than all the prepared infant foods combined. Cut out the advertisement and mail it to The Borden Company, Limited, 140 St. Paul St. West, Montreal, and they will send you, free of charge, a very helpful baby welfare book containing authoritative feeding directions and a vast amount of useful information on the care of baby. Also ask for Baby Record, a diary of baby's progress.

THE SPORTS MODE

A youthful interpretation in charcoal gray plaid silk crepe skirt, with saucy shade in black and white striped sheer woolen. The shoulder bow of silk crepe is its sole trimming. It is easily made as is noted in small views and one of the smartest looks. It is 36 inches long and made of georgette crepe, silk crepe, chiffon, voile, chiffon, flat silk crepe, silk plique and men's silk shirting fabric. Style No. 249 is designed in sizes 16, 18, 20, 22, 24, 26, 28, 30 and 32 inches bust measurement. Size 36 requires 2 1/2 yards of 36-inch material for separate skirt and 2 1/4 yards of 36-inch material for separate camisole. Price 25 cents in stamps or coin (coin preferred.)

How To Order Patterns

Address: Winnipeg Newspaper Union, 175 McDermot Ave., Winnipeg

Premier Ferguson, of Ontario, christening the "Imperial," a Gypsy Moth plane, presented to the Aviation League of Canada by Imperial Oil Limited, at the opening of the Hamilton Airport recently. The plane is being used by Major-Gen. J. H. MacBrien, C.B., C.M.S., D.S.O., in his travels about the country in the interests of aviation.

LEVEL CROSSING ELIMINATION IS BEING PLANNED

Ottawa.—The Board of Railway Commissioners, the road departments of the Provincial governments throughout Canada and the railways of Canada are making a joint survey of the level crossings situation with a view to a definite and comprehensive program of level crossing elimination.

The provincial officials are now engaged in classifying the crossings from the point of view of the degree of danger and the nature of the protection needed. When this has been done, the board, the provinces and the railways will confer and decide where the greatest urgencies lie. The most dangerous crossings will be eliminated or protected first.

The program to be drawn up will require from half a million to a million dollars a year from federal government, which means an expenditure of two to three millions annually. The grade crossing fund, which has been replenished at the rate of \$200,000 a year for many years, is proving insufficient since the campaign of the last few years inaugurated by the Hon. Charles Dunning, minister of railways. At present it is down to about \$120,000 and Mr. Dunning will probably ask Parliament next session to increase the \$200,000 to the larger amount.

Under the provisions of the Federal government's fund, which is administered by the Railway Board, will pay up to 40 per cent. of the cost of any crossing elimination and protection.

Father Sought By Radio

**Message Sent To Police Officer In
Far North To Advise Him Of
Son's Illness**

Ottawa.—A sick child in a hospital here is waiting reply from his father at the lonely Royal Canadian Mounted Police post at Chesterfield Inlet on Hudson Bay, to a message broadcast over the Canadian National Railways Radio chain.

The message was to advise Staff Sergeant M. A. Joyce, that his 14-year-old son, Scott, is seriously ill here, and asking him to get in touch with Ottawa by radio if he can get to a sending station.

World's Population

**Believe Population Will Be Doubled
In Next 150 Years**

Chicago, Ill.—Mankind probably will require at least 150 years to double the world's present estimated population, which is between 1,700,000,000 and 1,800,000,000, if fertility and mortality remain as at present. A mere doubling of the world's population however, will produce a striking change in the race composition, with a greatly increased percentage of Slavs. The population of North America, Western and Northern Europe, and Australia even now are no longer reproducing themselves.

Tourists Play Safe

Windsor, Ont.—"Don't shoot; I have no boos in this car." Banners bearing this inscription were pasted on the windshields and rear windows of automobiles reaching here from Chicago and other Illinois centres. It evidently constitutes a novel manner of protesting against the alleged promiscuous shooting of "bootleg" suspects by American state police.

Rumor Is Denied

Ottawa.—A rumor that Newfoundland government for the purchase of Labrador was given official denial here. "In no way is it true," said Premier King, when the matter was drawn to his attention. The rumor indicated that the price offered by the Dominion government was one hundred million dollars.

Hon. Heenan Will Go To Edmonton

Edmonton.—Hon. Peter Heenan, federal minister of labor, will be in Edmonton shortly to sign in behalf of the Dominion government the necessary documents and agreements in connection with the old age pensions scheme, about to go into operation under the joint auspices of the two governments.

Non-Party Delegation

London, England.—With the decision to send a non-party delegation to the League of Nations assembly in September, it became known that Viscount Cecil would probably be one of the delegates.

State Control Of Radio

Royal Radio Commission Makes Important Recommendations

Ottawa.—Government control of all broadcasting stations, elimination of advertising from the programs and that listeners pay the upkeep by licensees were advocated before the Royal Radio Commission at the final session here by the All-Canada Congress of Labor and the Canadian Legion of the British Empire Service League.

The Canadian Congress representatives also recommended that the present commission be continued or a similar organization be established vested with complete administrative control of radio broadcasting.

The Canadian Legion advocated a broadcasting organization that would develop imperial patriotism and Canadian culture. Canadians, said the Legion briefly, were being overwhelmed with foreign programs charged with propaganda.

The commission will at once begin the preparation of its report. It will probably be available about the end of the month.

Canada May Consider Relations With Russia

Communications From British Gov- ernment Have Been Received At Ottawa

Ottawa.—Certain communications of a "general and preliminary nature" regarding the signing of the optional clause, and also bearing on resumption of diplomatic relations with Russia, have been received by the government of Canada from the British government, that was the extent of the information given out here with respect to these matters which are accorded specific motion in the King's speech at the opening of the parliament.

Just what position the Canadian government is taking on the question of resuming diplomatic relations with Russia has not been stated. It is considered likely, however, that Canada will support any such move.

Two Injured In Explosion

Faulty Water Jacket Burst In Jew- ish Orphanage, Winnipeg

Winnipeg.—A violent explosion, which shook buildings within a half a block radius, caused injury to two persons and damage to the basement of the Jewish Orphanage, Mathe-son Avenue, north Winnipeg.

Many children are cared for at the Orphanage, but all escaped injury.

While a city water works employee was attempting to repair a faulty water jacket in the basement it exploded. The employee, George Bennett, was painfully hurt, while Mrs. A. Ossowsky, wife of the Orphanage superintendent, suffered from arm injuries and shock.

It was first reported that fire had followed the explosion, but this was erroneous, though firemen from central and north stations were called out and aided in bringing the injured from the building.

To Cross Atlantic In Small Vessel

Five Cleveland Men Believe They Can Make Return Trip

Cleveland, Ohio.—The little power boat Karf, manned by five men who built it, put out from here on an adventurous attempt to cross the Atlantic ocean.

The Karf, captained by Joe Lepich, 31, a German Great War veteran, took on 500 gallons of gasoline and 100 pounds of canned goods and water to last three months. Captain Lepich intends to skipper her down the St. Lawrence river and then across the sea to Hamburg, Germany. "We will be in Hamburg in ten days. The Karf will make the trip there and back," said the captain.

New Chancellor Of Queen's
Kingston, Ont.—James Armstrong Richardson, of Winnipeg, head of the firm of James Richardson and Sons, was chosen as the new chancellor of Queen's University to succeed Sir Robert L. Borden, who resigned several weeks ago. Mr. Richardson's name was the only one to be placed in nomination and he was unanimously chosen for the post.

May Spend Winter In Africa
London, England.—The Evening News says it understands the King is considering proposals to spend part of next winter in one of the British dominions. South Africa, about which confidential inquiries already have been made, is considered the most suitable.

CROP CONDITIONS ARE VARIABLE REPORT REVEALS

Ottawa.—The telegraphic crops report issued by the Dominion bureau of statistics showed a wide range of conditions across the country. Crop prospects continue satisfactory over Southern and Northern Alberta. Warm weather with plenty of rain is needed in Saskatchewan and Manitoba. Fall wheat is excellent in Ontario. Scarcity of rain also is reported from Nova Scotia. The largest strawberry crop is expected in the history of British Columbia. Favorable reports are to hand from New Brunswick and Prince Edward Island.

Reports by provinces for the end of June:

Manitoba — Manitoba department of agriculture:—

Crops started late on account of cool spring. Light rains last fall left little soil moisture this spring. Germination fair. Slight setback to frost on June 12. Rainfall scattered and variable. Need heavy general rain over province. Prospects fair.

Saskatchewan—Saskatchewan department of agriculture:—

Growth was retarded in June by cool weather and lack of moisture and crops are generally behind the average. Although moisture conditions were improved toward the end of the month by rain, warm weather with plenty of rain, especially in the southern districts, will be needed in July. In the Swift Current district, crop is week later than the average. Moisture supply varies widely. Will need good rains during next three weeks to make even fair crop.

Alberta—Alberta department of agriculture:—

Crop prospects continue satisfactory over southern and northern sections of Alberta. Yield greatly reduced over central area but condition of coarse grains and feed improved by rains during past week. Fall wheat very satisfactory in south. Good crop already ready for cutting. Livestock condition good. Dairy production increasing with improved pastures.

Sugar-beet crop generally good.

British Columbia—British Columbia department of agriculture:—

Weather during June has been cool with frequent showers which have generally benefited all crops. Grain crops making rapid growth and appear to be healthy and strong. Haying is general, but due to the cold backward spring the prospect is that the crop will be light. Root crops and vegetables are in splendid condition and making good growth. Possibly the largest strawberry crop in the history of the province is lower than last year. Raspberries and loganberries will yield approximately the same as last year. The yield of apples and other tree fruits will be about 25 per cent. less than last year.

PARLIAMENTARY SECRETARY

Miss Susan Lawrence has been selected as parliamentary secretary to the British minister of health by Premier Ramsay MacDonald, according to the list of appointments to the junior cabinet posts.

Gold Rush Started

Report Of Strike In Northern Sas- katchewan Causes Excitement

Big River, Sask.—The placer gold and platinum strike about 300 miles north of Big River is causing considerable excitement at this point. About 100 men have left here, and over 400 from other points have gone to see the scene of the new find. A number of parties are now outfitting at this point and will leave by barge and canoe this week.

The principal find is reported at Proliferator Lake. An old prospector who just arrived here from the scene of the strike to secure supplies reports that when he left over 500 claims had been staked around Proliferator and Birch Lakes.

The route to the new placer field is by water, the entire distance being without portages, via Big River, Isle La Crosse, Lake Deep River, Clear or Churchill Lake. All kinds of reports are coming in as to the richness of the new finds, one report stating that \$17 was washed from a shovel of dirt.

Yield To Japan

Hon. Herbert Marler Will Deliver Several Addresses In West

Ottawa.—Places at which Hon. Herbert Marler, Canadian minister designate to Japan, will speak on his trip west from Montreal on July 14, have been announced here.

On his way to British Columbia, Mr. Marler will speak at Toronto, Oshawa, Hamilton and Fort William, Winnipeg, Regina, Calgary and Jasper Park. In British Columbia where he will spend most of his time before sailing on August 29, he will speak at Vernon, Nanaimo, Duncan, Port Alberni, Penitentiary, Koondl Landing, Kimberley, Windermere, Kelowna, Sicamous and Victoria.

Discover Liquor Cache

Aeroplane Flows Up 20 Barrels Of Rum With Tall Sid

Sydney, N.S.—Plowing up 20 barrels of rum with the tall skid of his plane was the unique experience of Major-General J. H. MacBrien, when engine trouble drove him into a forced landing on a farm near here. The cache was neatly hidden under sticks covered with sod, and had the Moth dropped a wheel into the pit instead of neatly straddling it, the results might have been serious for the pilot and his guest, Dr. Fred man O'Neill.

Prince Sails For Home

Prince Henry Given Enthusiastic Send-Off At Quebec

Quebec, Que.—Prince Henry, Duke of Gloucester, concluded a month's visit to Canada when he sailed from this port on the "Empress of Australia" bound for England. A flag draped ship and the presence of the Governor-General, Lord Willingdon, and Lady Willingdon on the dock heralded the Prince's departure, while citizens of the ancient capital turned out in large numbers and gave the King's fourth son an enthusiastic send-off.

PLAN TO SOLVE LABOR PROBLEMS IN GREAT BRITAIN

London, England.—In debate on the address in reply to the Speech from the Throne, Right Hon. J. H. Thomas, Lord Privy Seal and minister of employment in parliament outlined the government plans for reducing the volume of unemployment in Great Britain.

Schemers must not be considered with a view merely to giving work, but also from the standpoint of stimulating trade at home and abroad, he declared. "What we import we should make for ourselves," he asserted amid cheers from the opposition benches.

Mr. Thomas continued that the railways imported wooden track sleepers when examination had shown that only technical difficulties prevented them from using steel sleepers which could be made in Britain.

Road schemes costing \$187,500,000 and providing work for five or six years would be speeded up, Mr. Thomas said, adding that the government's contribution would be paid out of the road fund.

Arrangements would be made for the immediate re-construction of the Waterloo Bridge on which depended the great Charing Cross bridge scheme which would involve expenditure of \$55,000,000. Other schemes to be submitted to the railway companies were for the electrification of the Great Eastern Railway suburban lines running out of Liverpool Street station, tube extensions, improvements in docks and harbors, and a freight railroad around outer London to avoid cross-London traffic.

The natural resources of the country would be developed, including land drainage, forestation and fisheries. Mr. Thomas declared he was seriously considering a proposal to make Scotland more attractive and thereby enable "our American cousins to see the thrill of the Scots," a statement that caused laughter.

Mr. J. H. Thomas announced he was going to Canada when Parliament rises at the end of the present month to discuss with the Canadian Government the subject of British migration to Canada.

The minister stressed that in any discussion of migration with the Dominion, nothing would do more harm than the suggestion that Britain wanted to solve her unemployment problem at their expense.

"They will resent it and resent it bitterly," he said. "I believe migration is a problem that has to be negotiated on the spot. It is something which has to be discussed in all its bearings, because anyone who has visited Canada and knows it as I know it, knows perfectly well the remarkable change from an agricultural to an industrial population that is taking place there."

"Hitherto our migration schemes have been based on the assumption that agriculturists alone were wanted. That is not true today. Equally, labor there has safeguarded its position by saying 'no, we are not going to have people forced on us to lower and break down our standards.'

"I propose to visit Canada myself immediately the House rises to discuss the whole problem."

VISCOUNT CECIL ON DELEGATION TO GENEVA

London, England.—Cheers from the Labor benches greeted the announcement in the House of Commons of the appointment of Viscount Cecil to represent Great Britain at the Preparatory Disarmament Commission of the League of Nations and to attend the forthcoming assembly of the league.

The league assembly delegation also will include the following:

Right Hon. Ramsay MacDonald, prime minister.

Right Hon. Arthur Henderson, secretary for foreign affairs.

Right Hon. Wm. Graham, president of the Board of Trade.

Mrs. M. A. Hamilton, Labor M.P., Blackburn.

Henley Maria Swanson, speaker, lecturer and publicist.

Viscount Cecil, who was under-secretary of state for foreign affairs and minister of blockade in the wartime coalition government, and later became Lord Privy Seal in the Baldwin Conservative government in 1923 and 1924, had considerable experience at Geneva as a British spokesman. He resigned from the disarmament delegation shortly after the collapse of the tripartite naval conference at Geneva in 1927.

A protest was raised from the Conservative benches after Mr. Henderson had announced the delegation. The Conservative members said it was the first occasion, when the "doubtful exception of Viscount Cecil," the British representation was entirely made up of representatives of one party.

Mr. Henderson claimed, in reply, that by Viscount Cecil's inclusion, he had fulfilled the undertaking to follow the precedent set in 1924 when the delegation was not strictly of a party basis.

Airmen Have Narrow Escape

Privately Owned Plane Made Poor Landing Near Melfort

Melfort, Sask.—Two occupants of a privately owned aeroplane narrowly escaped injury when their machine made a poor landing on the shores of Windsor Lake, a few miles south of here. The plane was seriously damaged. In attempting to land, the plane skinned over the roof of a house, barely cleared a grove of trees and struck the ground with the right wing first. R. Leadbitter and O. P. Brownfield extricated themselves from the part-wreck without difficulty.

Killed By Artillery Shells

Two Accidents Cause Death Of Five In Poland

Warsaw.—Two accidents involving heavy artillery shells killed five persons and injured a number of others in Poland. In one case two country boys found a shell on a Russian-Austrian battle front near the village of Luck. They took it home, where it exploded, killing a family of four and wrecking the home. The other accident occurred near Cracow, where, in artillery practice, a shell landed in a group of military observers, killing one and injuring several others.

Opposing Higher Tariffs

Washington.—The administration is bringing pressure to bear upon senators and congressmen to prevent increases in tariff duties which would be detrimental to United States foreign trade, well informed circles here believe. It is understood that Canadian trade is the particular concern of the administration.

Injuries Proved Fatal

Los Angeles—Cladys Brockwell, motion picture actress, died of injuries received in an automobile accident. Her physician said death was due to peritonitis which developed as the result of internal injuries.

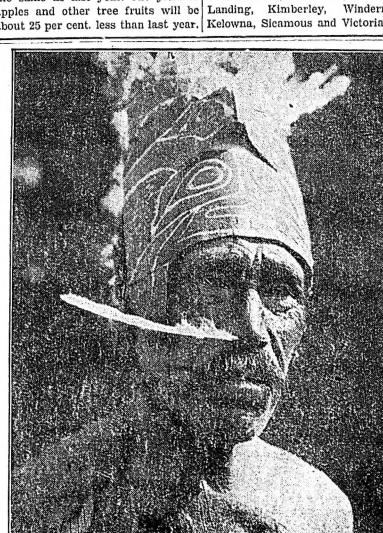

Dominion Rifle Meet

The annual Dominion Rifle Association meet will be held this year from August 12 to 17, it was announced recently. The meet will be held at the Connaught Range, Ottawa.

Favors Arms Cut

Tokio.—Admiral Hyo Akarade, minister of naval affairs in the new Meimatsu cabinet, in an interview pledged support to further limitation of naval armaments.

In England 2,500 automobiles are being delivered to new comers every week.

An Old-Time Canadian

He is a member of the Kwakiutl-Nootka tribe of West Coast Indians and this is the regalia in which he appeared when his tribe welcomed the Governor-General on his recent trip on Canadian Pacific steamship "Princess Royal" along the islands and shores of Vancouver. The quill through the nose is more reminiscent of the West Coast of Africa, than the West Coast of Canada, but it shows that strange customs and costumes are to be found still in the Dominion.

On Vacation Bent

A Little Advice To Those Who Would Secure the Utmost Benefits From a Holiday

Brunettes tan better than blondes. In fact, some blondes can't acquire a coat of tan at all; a tan blow for many, since a tanned complexion has become so fashionable that drug stores now sell it in bottles.

According to a special "holiday bulletin" issued by the Canadian Social Hygiene Council, in co-operation with the Department of Public Health of Toronto, there are a number of "dons" and "d'oh's" which the holidaying city or town-dweller should observe, if his constitution is to stand the strain of the summer rest-period.

Don't scratch mosquito bites, don't pick poison ivy, watch your milk and water supplies and get plenty of sun, but not too much at once, are some of the admonitions. And here's an emergency medical kit that everyone is advised to pack in the suitcase.

3 or 4 bandages, 2 or 3 inches wide.

1 pound of sterilized gauze.

1 ounce of absorbent cotton.

1 or 2 ounces of tincture of iodine.

1 small roll of adhesive plaster about 1 inch wide.

1 ounce of boracic acid.

1 or 2 ounces of bicarbonate of soda.

A hot water bottle.

2 ounces of aromatic spirits of ammonia.

"The last item is important in the event of a collapse," the bulletin advises. "From one-half to a tea-spoonful of aromatic spirits of ammonia in a wine-glass of water acts more promptly than whisky or brandy. It is one of the best stimulants we have." Cut or burns should be washed with soap and water and carefully painted with tincture of iodine. Splinters should be removed with a needle sterilized by being held for a few minutes in boiling water and the injured place treated with iodine. Poison ivy irritation should be treated with the juice of the jewel weed, a plant growing two to four feet high, in marshy places, and possessing a juicy, semi-transparent stem, and with orange-colored flowers with brown spots. Either strong laundry soap or fresh lime-water is a good substitute.

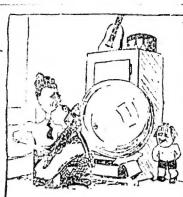

Avoid being overly zealous in your efforts to get sunburned. Half-an-hour at a time is quite as long as any part of the body, not accustomed to exposure, should be subjected to the strong rays of the sun, for the first few days; then it will be safe to increase the time to an hour, and after a fairly good coat of tan has been developed you are well protected against the dangers of sunburn. If you do not take these precautions your holiday may be spoiled—painfully.

Furthermore, recent revelations as regards the therapeutic value of the chemical rays of the sun have been such as to make one feel that it would be difficult to over-estimate their importance. Therefore, we recommend for small children the sun suits which can be obtained in any of our stores. These suits only protect the hips and upper parts of the thighs and leave the balance of the body exposed to the sun's rays.

It is well to bear in mind that in order to get the therapeutic benefits it is not absolutely necessary that you be exposed to the direct rays of the sun; those in the sky shine, or reflected rays from the sky and clouds. On a clear day you may lie or sit on the shady side of the house, with the blue dome above you, and get from one-third to one-half of the benefits of the rays of the sun that you would get by exposing yourself directly to them.

For mosquitoes, three things should be remembered: netting, liquid ammonia, and coal oil.

The netting shuts them out, the liquid ammonia applied promptly to a bite, frequently neutralizes the poison and prevents subsequent itching, and the coal oil, put in very

"That wretched boy has been putting soapsuds in my trumpet again!"
Das Illustrirte Blatt, Frankfurt.

W. N. U. 1793

small quantities on top of the water in rain-barrels, little ponds, etc., prevents the mosquito larvae from developing into mosquitoes. Furthermore, certain aromatic preparations such as spirits of camphor, menthol, and oil of citronella may be applied to exposed parts of the body to keep these pests away.

Insist that your food be protected from the filthy, disease-spreading house-fly.

And do not be on the go all the time during the holiday. Take some reading matter with you and spend part of the day, particularly in the middle of the day, in the shade of the trees, in your hammock, or in an easy chair, or lying on a rug on the ground. Do not dance every night during your holiday and expect to come home rested and refreshed for the balance of the year.

A Root Disease Of Wheat

"Take-Ah!" Does Considerable Damage To Cereal Crops

The disease called "Take-Ah!" does considerable damage to cereal crops, particularly wheat. It also affects barley, and rye, to a slight degree. According to Mr. H. T. Gossow, the Dominion Botanist, in Circular No. 10, of the Department of Agriculture, at Ottawa, the disease at times appears in rather large patches. Young seedlings are frequently seriously blighted. The most characteristic symptoms are seen as the plants reach the heading stage. They are distinctly shorter than normal plants and have a blighted appearance. The lower leaves are brownish and otherwise discoloured. The heads contain shrunk almost worthless kernels. When a wheat crop is severely attacked it is recommended to follow the next year with oats or some other crop not subject to serious infection, and to summer-fallow the field before again sowing wheat. If the disease is prevalent it is advised not to sow wheat as a first crop following western rye grass or bromegrass. In working out a rotation in areas where "take-all" is prevalent, it should be remembered that flax, sweet clover, corn, sunflower, and potatoes are not attacked by this disease.

Prairie Forest and Timber Limits

One Quarter Of The Forest Resources Of Canada Are In Prairie Provinces

So famous are the prairie provinces of Canada—Manitoba, Saskatchewan and Alberta—for their production of many millions of bushels of wheat, oats, barley, rye and other farm crops, that comparatively little is known of their other resources. Among the great assets of the prairie provinces are the nation's forest and timber limits, which amount approximately a quarter of the forest resources of the Dominion, and include one-third of Canada's pulpwood supplies. Saw-materials, cordwood, posts, poles, and so on are all represented. Eighty-seven lumber mills are in operation, the output of which has an annual gross value of over five million dollars. A recent development of the forest resources on lands owned by the Canadian Federal Government has been the establishment of a pulp and paper mill in Manitoba, employing 400 people on full time.

Heads Usually Win

Centre Of Gravity Of Coin Rather On Head Side

Why is it, asks a writer in *Answers*, that when a coin is tossed, say, at the start of a match, the general tendency of the man who has the call is to say "Heads?" Even those who always "make it heads" would be puzzled to say. But there is a scientific basis for the belief that a coin is more likely to come up heads than tails. An experiment carried out some years ago with four pennies, which were tossed a total of 3,000 times, showed that heads outnumbered tails. In tossing a penny 100 times, the result worked out, on an average, 51 heads to 49 tails. An interesting point, which probably has some effect on the result of a toss, is that the centre of gravity of a penny is rather the head side than the tail.

Canada's Position

Canada's whole position is too closely bound up with that of the British Commonwealth, and these islands in particular, for her to link herself up with the Pan-American Union, where it is probable that her own and special interests might clash at any moment. Asserting a claim to special nationality entails no breaking of historic ties any more than that which follows the setting up of separate homes by members of one family.

T. O. F. HERZER

Manager of the Canada Colonization Association, who has just been appointed Manager also of the Colonization Finance Corporation of Canada, Limited. This announcement follows closely upon the advice issued by the Dominion Mortgage and Investments Association regarding the new plan for settlement of privately owned lands in Western Canada. Mr. Herzer, acting in a joint capacity, thus brings to the new Corporation the settlement experience of the C.C.A., subsidiary of the Canadian Pacific's Department of Colonization and Development.

Arabian Hospitality

Quer Law By Which Murderer Can Escape Punishment

Among the Arabs, if a man has murdered another, flees to the dead man's father, and is given the friendly cup of coffee, his life may be spared. On one occasion, it is related that such an incident took place in Cairo. Friends of the family came in to relate the news to the bereaved father, and, recognizing the murderer crouching in a corner, demanded vengeance. "No," said the parent of the dead youth: "he has drunk coffee here, and I must regard him as a guest."

Wanted a Treat

Mrs. Chatterton: The dentist is only going to take an impression for my new plates. You won't have to go with me. I don't need your help.

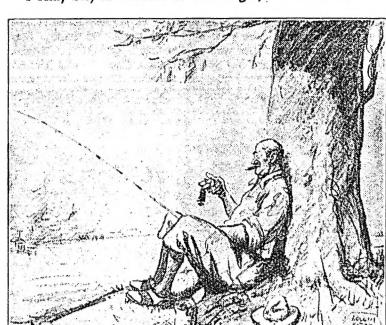

Husband: But, dearie, I do so want to see you with your mouth full of plaster sitting in silence for ten minutes.

A Lot Of Lumber

The New York Times tells us that the lumber used last year in the plants of the Fisher Body Corporation, makers of bodies for all General Motor cars, would have built a city of eight-room-frame houses large enough to accommodate more than 250,000 people.

When meerschaum is first dug from the soil it is soft, like soap.

"I Am, Sir, A Brother of the Angle,"—Izaak Walton

Rollin Kirby, famous cartoonist of the New York World and twice winner of the Pulitzer prize of \$500 for the best cartoon of the year—was the winner for 1928—is not only a great cartoonist but an ardent fisherman as well, even rivalling Heribert Hoover, President of the United States, in his devotion to angling. "No man can lose what he never had," said Izaak Walton, and that's what Kirby tells the fisherman who says he caught the biggest one—but got away! Kirby has fished in many rivers and lakes of Canada, and declares that no better fishing exists anywhere. His cartoon indicates that the fisherman is happy, far from business cares, and that he is sorry the boys in the office are not having such a good time.

Par-famed is the salmon of Nova Scotia, New Brunswick and British Columbia, and there are expert guides aplenty to care for the angler and show him where the big ones lurk. The Laurentian Mountain region, not far from Montreal, has splen-

The Herbaceous Border

A Charming Feature Of the Well-Kept Home Grounds

The well arranged herbaceous border is a charming feature of the well-kept home grounds. If the plants have been well selected there is assured a continuous flower display from early spring until the autumn frosts arrive. The perennial border may be started either by the purchase of plants in the fall or spring of the year, or by raising the plants from seed. The latter way is much more economical, and this is the season of the year when the seeds should be planted for next year's border. In a new bulletin on "Herbaceous Perennials" by Miss Isabella Preston, of the Horticultural Division of the Dominion Experimental Station, it is recommended to establish the seed bed in a shady position though not under trees. The soil need not be rich, but if it is very heavy it is recommended to lighten it with sand. For good germination the surface soil must be made very fine. Miss Preston recommends a width of four feet for the bed and a length limited only by the available garden space and the quantity of plants desired to be grown.

This bulletin, which contains a wealth of many years' experience and observation, is now ready for distribution at the Publications Branch of the Department of Agriculture, at Ottawa. The perennials best suited for Canadian gardens in all parts of Canada are enumerated and described and their culture carefully dealt with.

Lime For Poultry

Thirty Million Tons Of Shells To Be Brought From Labrador

Commercialization of thirty million tons of lime shell deposits on the islands of Hamilton Inlet, Labrador, is the object of an expedition which sailed for northern waters recently, on the steamer "Winona." The shells will be converted into poultry feed. The ship will bring back 30,000 tons for a Portsmouth, N.H., firm, and the venture is backed by St. John's Newfoundland business men. Other shipments will be taken to St. John, Que., it is expected.

Bibles For Royal York

More than 2,000 persons sang lustily in the great convention hall of the Royal York, Toronto, additional hundreds stood outside in the convention floor lobby, and 1,000 were turned away, when 1,400 Bibles were formally presented by international officials of the Gideons to the management of the hotel for placing in the rooms.

When meerschaum is first dug from the soil it is soft, like soap.

Describing the Horse

Information As Given Will Be Clear To Driver Of Motor Car

The horse is an automotive animal, consisting of a body mounted on four-brake legs. It has three speeds forward; namely: the walk, the trot, and the gallop. The intermediate gear is not so popular owing to the vibration. The horse may also go into reverse or stand still in neutral.

The engine of the horse is in the centre of the body and the driver sits on the hood. In the rear of the driver is room for a rumble seat, though this is not featured in the more recent models. The horse has a tail but no tail-light, thus distinguishing it from a motor car, which has a tail-light but no tail.

It is always well before starting out on your horse to see that he has been fueled and has sufficient oil in his radiator. There is no need to worry about oil, as he supplies his own lubrication. The surface soil must be made very fine. Miss Preston recommends a width of four feet for the bed and a length limited only by the available garden space and the quantity of plants desired to be grown.

The driver sits with his feet, respectively on the right and left, running boards and clutches the steering gear firmly in his hands.

To start the horse he exerts a firm pressure with his right heel against the body of the horse in the neighborhood of the differential. He then shifts gradually from low to intermediate and to high as the horse picks up speed. If this is done too hurriedly, the horse may stall, automatically shifting into neutral. The driver must be on his guard against this, as the ordinary horse is not equipped with a windshield and the driver may find himself catapulted over the headlights.

Horses may be had in numerous styles to fit every purse and to serve widely varied purposes, with bodies of various attractive lines. Among others is the racing horse, sometimes seen in a brilliant finish and not infrequently in a dull one. But perhaps the best feature of the horse is that one never thinks of parking him on less than an acre or two of land. Baltimore Sun.

Men Who Succeed

Are Those Who Have Initiative Coupled With Judgment

Initiative is the mainspring of business enterprise, and when coupled with judgment becomes an irresistible force.

The world is divided into four classes:

1. The man of initiative, who does without being told. For him lies the reward of money and honors;

2. The man who does upon being told only once. That man obtains honor;

3. The man who does after having been told several times. He is not worth his salt;

4. The man who does nothing till he is pained, and even then fails. Such creatures deserve the contempt that the world always accords them, unless they happen to be rich men's sons. Then they have the way made easy for them—but pity the father!

The Road To Popularity

People Who Travel It Must Observe Six Rules

Before you start along the road to popularity, you must have six things packed ready to take with you:

1. Unselfishness, a willingness to forget self in the interests of others. 2. Sincere friendliness towards people of all ages. 3. Ability or willingness to adapt oneself to be at ease under various circumstances and with all people. 4. An unassuming manner, not boasting about what you are or have, or can do, and avoiding stirring up needless enmities and jealousies. 5. A controlled tongue that refrains from gossip and needless criticism, and speaks in kindness. 6. Trustworthiness, that others know you will keep confidences, and that your word is as good as your bond.

Farm Planning In Alberta

Town planning in Alberta is being extended to include farm planning. The farmer may have expert advice concerning the plans for his house and barns and the lay-out of his farm.

Will Use Tyndall Stone

The Federal Government have decided on the use of Tyndall stone in the new Federal Government Building at Saskatoon, to cost \$250,000 and the new \$500,000 Federal Building in Calgary.

Western Air Mail

Innovation In the West Fraught With Great Possibilities

It is announced from Ottawa that with the awarding of a contract for Western Canada air mail, the whole business of preparing for the inauguration of an air mail service in this section of the Dominion has been put in hand and that every effort will be made to bring the route into operation at the earliest possible date.

This innovation in the West should have great possibilities, and not just for the West, but for all Canada. It should add to commercial intercourse between East and West and bring closer together in a number of ways. It will mean a great saving of time in business mail, and this is important in the business world of today, in which dispatch figures large. It also illustrates further the opportunities for aviation which exist in this far-flung country. Already this science has been of tremendous value in surveying and mapping regions that a few years ago were inaccessible. It seems destined to be one of the great means of transportation for freight and passengers across the Dominion, and it may be that a few years hence from coast to coast great ships of the air will be flying across the Atlantic and Pacific coasts little more than a day's journey apart. In a booklet issued by the University of Toronto, Canadians are urged to "turn their eyes to the skies, since the dependence of national development and progress on transportation is nowhere more marked than in Canada."

No country has a greater need for aviation than Canada and none with greater opportunities for its success. These facts help to explain its almost spectacular growth. Another factor lies in the adventurous wholesomeness which aviation offers to the youth of the land.—Regina Leader.

Has Increased In Dignity

French Title "Marshal" Derived From Words Meaning Groin

The French cabinet has decided to abolish on the death of the present holder an excellent example of a word which has increased in dignity in the course of the centuries.

It derives from a couple of German words, "maran" and "sele," which may be translated horse-servant or groom. In course of time and especially in France, this type of servant acquired a new status regarding tournaments, etc., and presently becoming a kind of master of ceremonies, regulating the order of precedence at feasts and balls, under the title of "marshal." His social progress continued until he blossomed into a "marshal" or "marshal," and the groom had become a commander-in-chief of armies.

Gives Credit To Canada

Dominion Grows Best Wheat Says New Zealand Farmer

Mr. James Lobb, who went from England to New Zealand at an early age and became a very successful farmer, is celebrating his seventieth birthday by making his sixth tour of the world. He says that his globe-trotting has satisfied him that Canada can beat New Zealand in growing wheat, but not in the production of butter, wool and meat. Mr. Lobb is of the opinion that the inhabitants of Great Britain live, work and play under better conditions than the people of any other country in the world.

Howell—"That's a pretty bad cold you have."

Powell—I thought it was up to the usual standard.

As some fast ones see it, the only employment worth while is breaking records.

If you wish to please your friends get through talking so they can begin.

"Wouldn't you marry an idiot for the sake of his money?"
"Oh, your proposal is so sudden!"
—Lustige Kojner Zeitung, Cologne.

A Friend to Women

If Lydia E. Pinkham were alive today she would be one hundred and nine years old. Her descendants continue to manufacture her famous Vegetable Compound and the integrity of four generations is behind the product. In many families today, mothers are teaching their thirteen year old daughters to depend upon the same medicine their grandmothers praised back in 1870.

The Singing Fool

By HUBERT DAIL

Copyright, 1928, Warner Bros. Pictures, Inc.

SYNOPSIS

After a night of revelry at a New York uptown night club, Marcus, the famous revue producer, takes a party of four to Blackie's, a downtown club, which stays open till sunrise. They are seated at a "ring-side table" by Al Stone, Blackie's chief comedian and singing waiter, who takes them over for his act. Al is Marcus' double. Marcus' identity, Grace, the cigarette girl, is devoted to Al and ready to love him, but he does not see that. Al falls in love with Molly, the bar singer in her dressing room. He moves toward her as if drawn by a magnet. He is in love with her, but Molly is indifferent to him.

CHAPTER III.

Al entered Molly's dressing room, depositing his tray of beers on a nearby stand. He forgot the drinks, forgot the party of fashionably dressed men and women who were impatiently waiting for them in the big room outside, forgot everything except the girl he adored—Molly.

He stood quietly by her side for a moment, saying nothing. And Molly, the balding singer, continued deftly the business of making up as she sat before her dressing table. She wished to goodness that this singing waiter, who was always composed, silly songs, would confess to his affection to some other else. But, finally, she couldn't escape the penetrating insistence of his eyes as he gazed over her shoulder at her decidedly attractive reflection in the mirror. She turned her head with a sigh of resignation, and said ambiguously:

"Ain't love grand?"

Al did not know quite what she meant by that. If she were spoiling him, well, she could—he didn't mind. Whatever she did she couldn't prevent his loving her. But now her remark unlocked the flood gates of his speech.

"I can't help it, Molly, if I'm crazy about you," he whispered ardently, coming still closer. "I've been that way ever since the first time I saw you. I think you're the most beautiful girl in the world — on the level, I do!"

Al longed to reach out and stroke her glossy golden hair; he wanted to catch her beautiful little white hands and pull her close to him. But he realized he couldn't do that now;

the corridor and saw his singing waiter in earnest confab with Molly. Blackie took the situation in at a glance, but decided not to bawl out Al. After all, when a man's in love, you must expect him to be bally, reasoned Blackie. He stepped to the doorway and said, not unkindly:

"Come on, Al—or the job." Al turned to his tray of beers but, before picking it up, thrust his precious song on Molly's dressing table before her.

"Read the words, please," he begged and, catching up his tray vanished.

Blackie Joe stood nonchalantly in the doorway, one hand thrust into his trousers' pocket, staring after Al's retreating back. Then the proprietor turned to Molly.

"Molly, do you stuff tonight. Marcus is out in front."

Molly straightened as if touched by an electric shock. All trace of bordom vanished.

"Shut my mouth, Blackie! You don't mean it—not Marcus who puts on the roof revues?"

"No one else but," said Blackie, nodding delightedly.

The glow in Molly's eyes was replaced by a cool, calculating stare. Marcus was outside—what an opportunity! Marcus, whose approval made fame!

"Blackie," she begged, "introduce me to him."

Blackie nodded—"Okay, I'll do that"—and returned to his floor show. Two boy hoopers were strutting their stuff near the Marcus table, while Al was serving the boated beers.

As Blackie came closer, he heard Marcus' protesting voice:

"Be yourself, waiter."

The remark should have been like a ring in the face to Al, but it wasn't. If he had stopped to think he would have known she addressed him as "waiter," simply to humiliate him.

"You know, Molly," he began earnestly, "I'm not going to be a waiter all my life. Some day I'm going to sell some of the songs I've written. Don't you see, Molly, that if I just have you by my side I can't miss. I can write ridiculous ballads that will put you over big—make you the talk of Broadway!"

Molly's boredom was apparent. "Oh, run along, Al. I've heard all that talk before."

But Al scarcely heard her words. He was reaching in his coat pocket for some of the songs he had written. He drew them out, sorted them in nervous haste, and produced the one most precious to him—"Always." This was the heart-throb song he had written just the night before, thinking of Molly every moment during the creation of it. As he had penned the words and arranged the music he had visualized Molly singing it in her lovely, sensuous contralto voice. It was her song; she had inspired it completely.

Molly had returned to her makeup boxes; she did not even glance up as Al extended the song for her inspection.

"Molly!" he pleaded desperately. "Can't you see that, although I can't talk the way I feel, I can write my feelings into music. I've written this song just for you. I want you to do something for me—sing it to night."

Al's beseeching tone would have brought a sympathetic response from almost any woman, but not Molly. She was humming softly to herself as if to drown out his words.

Meanwhile, the beans stood on the nearby table, the white, feathered game gone from their tops. Meanwhile, Marcus the great producer, was in the outside room raging at the delay.

He rapped peremptorily on the table and finally summoned Blackie to make a complaint. Blackie listened, nodded rapidly, and headed for the bar in search of Al. But at the doorway he glanced down

(To Be Continued).

Canadian Is Head Of Air Corporation

Graduate Of Toronto University
President Of World's Largest
Aviation Concern

Clement M. Keyes, a native of Chatsworth, Ont., and graduate of the University of Toronto, is to head the largest aviation concern in the world. This became known coincident with the announcement of the Wright Aeronautical Corporation, Curtis Aeroplane and Motor Company, of which Keyes is president, and ten affiliated companies.

The merger which is to be effected through the formation of a holding company—Curtiss, Wright Corporation—brings together the business founded by America's three pioneers—the Wright brothers and Glenn Curtiss.

Curtiss Wright Corporation will have assets of \$70,000,000, but at current market values it will rank as a several hundred million dollar concern.

Mr. Keyes is to be president of the new holding company. Mr. Keyes, who is 54 years of age, is of Irish and Welsh descent. Graduating from Toronto University in 1897, he came a few years later to New York. He entered newspaper work in Wall Street in 1901. In 1911, he established a bond business. From there, he stepped into the aviation industry, becoming president of Curtis Company.

Most Important

"I suppose there are many problems which Polar explorers seek to solve?" said the unscientific man.

"Yes," replied the traveller, "a great many."

"What is the most important one?"

"Getting back."

Michigan has by far the greatest number of any state.

In Czechoslovakia 15,000 persons are engaged in tobacco growing.

W. N. U. 1793

the corridor and saw his singing waiter in earnest confab with Molly. Blackie took the situation in at a glance, but decided not to bawl out Al. After all, when a man's in love, you must expect him to be bally, reasoned Blackie. He stepped to the doorway and said, not unkindly:

"Come on, Al—or the job." Al turned to his tray of beers but, before picking it up, thrust his precious song on Molly's dressing table before her.

"Read the words, please," he begged and, catching up his tray vanished.

Blackie Joe stood nonchalantly in the doorway, one hand thrust into his trousers' pocket, staring after Al's retreating back. Then the proprietor turned to Molly.

"Molly, do you stuff tonight. Marcus is out in front."

Molly straightened as if touched by an electric shock. All trace of bordom vanished.

"Shut my mouth, Blackie! You don't mean it—not Marcus who puts on the roof revues?"

"No one else but," said Blackie, nodding delightedly.

The glow in Molly's eyes was replaced by a cool, calculating stare. Marcus was outside—what an opportunity! Marcus, whose approval made fame!

"Blackie," she begged, "introduce me to him."

Blackie nodded—"Okay, I'll do that"—and returned to his floor show. Two boy hoopers were strutting their stuff near the Marcus table, while Al was serving the boated beers.

As Blackie came closer, he heard Marcus' protesting voice:

"Be yourself, waiter."

Al leaned over, quick as a flash, and answered:

"Shh! Not so loud—they'll all be wanting them."

Al turned away in annoyance. Al shouldn't wisecrack that way with such a man, thought Blackie. It was all right with the regular patrons, but not with anyone like Marcus. But before Blackie could smooth things out, Al had picked up the glass and hurried off to bring a new beer.

At the bar doorway he again confronted Molly—in her most gorgeous costume, garbed for conquest.

"Molly, did you like it?"

"Like what?"

"My song. Will you sing it?"

Molly's eyes flashed in sudden anger. "For heaven's sake, Al, let me alone! I've important business on tonight. I didn't read and I won't sing it! That's flat!"

As Al receded before her lashing words his gaze dropped. His song lay on the floor—under Molly's slim, high curving heel!

**Mountain Being Eaten Away
Oxon In South Africa Find Salty
Clay Fatahable**

Oxon have eaten away 10,000 tons of earth from the side of a mountain, near Pretoria, South Africa.

Natural salt deposits, which cattle are fond of licking, are common all over the world, but in this case the animals have apparently been making whole and satisfying meals from the earth itself. So far they have made a cave 10 feet high and 50 feet across deep into the mountain—and they are still eating. They have almost entirely given up eating grass, but they have the appearance of being thoroughly well fed.

Samples of the earth from the cave have been sent to Johannesburg analysts. It is easily crumbled into fine dust and is practically tasteless to the human tongue. Experts state it appears to be a clay containing potash and mineral salts, which would make it attractive to cattle with an abnormal appetite.

**Made Police Doubt
Finger Print System
Clever Crook Found Method To
Puzzle Police Of Three
Continents**

The finger print as a means of identification has ceased to be infallible. Quite apart from the ordinary use of rubber gloves, there is at least one case on record of a crook who threw doubt upon the whole international system of this method of identification. This criminal was Louis Cimboillier, a French doctor who disguised himself in the profession served a sentence in prison and then became a burglar. Once outside the prison gates he set himself the task of finding a method to thwart the finger-print system. He used his professional knowledge to secure a job in the School of Medicine at Lyons. There, with great skill, he contrived to take the skin from the thumb and fingers of a corpse, being careful afterwards to hide his handwork by applying chemicals that speeded-up decomposition.

He then mounted the skin on specially prepared parchment and set out upon a series of audacious burglaries. He deliberately left finger-prints of a known, but dead, crook! His method of using the gruesome device was first to press it against his chest and so moisten the skin for the impress, and then lay it over various articles in the room where he had committed the burglary. Cimboillier confessed to all this on his death-bed; but not before he had given the police of three continents very grave reason to doubt the reliability of the finger-print system. The professional crook of today is very often a man of scientific attainments, but they are matched against equally clever brains.

Density Of The Stars

The enormous density of certain stars, was the theme of an address recently given before the Institute of Mechanical Engineers, in London, by Prof. A. S. Eddington. "There are two or three stars known to us which are believed to possess marvelous density. The best-known of these is the companion of Sirius. The density is found to be 60,000 times that of water. A ton of its material would go inside a match-box."

"Your wife is talking of going to France this summer. Have you any objections?"

"No, certainly not, let her talk."

Has Overcome Handicap

How a 17-year-old Toronto boy, paralyzed since infancy and unable to write, dictated his matriculation examinations has been described by

Premier Ferguson. He answered questions in the presence of the provincial registrar and is expected to obtain good marks.

Use Miller's Worm Powders and the battle against worms is won.

These powders correct the morbid

conditions of the stomach which nourish worms, and these destructive parasites cannot exist after they have come in contact with the medicine.

The worms are speedily evacuated with other refuse from the bowels.

Soundness is imparted to the organs

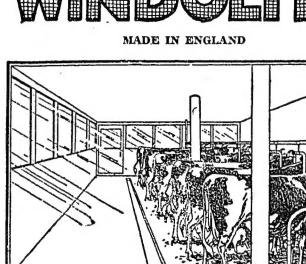

and the health of the child steadily improves.

Lake Titicaca in Peru, 12,644 feet above sea level, is the highest point in the world where steamers are found.

Minard's Liniment for Rheumatism.

Of the 12 biggest banks in the world eight are said to be British with five of them in London.

**WINDOLITE The Improved Glass Substitute
MADE IN ENGLAND**

WINDOLITE stands for 100 per cent sunlight. It makes light and strong windows for cattle sheds, dairy stables, poultry houses, brooders and all buildings. It is economical, unbreakable, flexible and is easy to cut and fit. It is now being successfully used for sunrooms, verandas, schools, factories, hospitals, swimming pools, houses, etc. It keeps out cold—will not crack or chip—when heated or cooled—will not warp or shrink. WINDOLITE is supplied in rolls any length but in one width of 30 inches only. A square yard of WINDOLITE weighs about 14 ozs. while a square yard of glass weighs about 135 to 150 lbs. The improved WINDOLITE requires no varnish. WINDOLITE is made in England.

Price \$1.50 Per Square Yard, f.o.b., Toronto.

Use WINDOLITE and let

YOUR PLANTS

YOUR CHICKENS

Back in 100% Sunlight

Send for booklet "WINDOLITE".

COMES WITH A MESSAGE OF HEALTH

THE sun is the all-powerful life producer, Natural antiseptic and tonic, WINDOLITE is the sun's most important ally.

Medical research has definitely proved that from the point of view of Health and Hygiene, the most effective among the sun's rays are the Ultra-Violet rays, which possess the greatest power for the prevention and cure of disease and debility.

Science has further established that ordinary window glass does not allow the passage of Ultra-Violet rays, so that by using glass we are artificially excluding these vital rays. The use of WINDOLITE has completely satisfied the long-felt want. Exhaustive experiments have conclusively proved that it is a most effective substitute for glass, that it freely admits the Ultra-Violet rays, has the most beneficial effect on the growth and development of plants and chickens and on the well-being of cattle, enabled for the first time to have healthy light instead of darkness in their sheds.

Indeed, the discovery of WINDOLITE has during the last six years completely revolutionized gardening, given a new stimulus to poultry breeding, increasing the egg-laying capacity and fertility of chickens, has greatly improved the health of cattle and is now being used in domestic and household requirements.

Reduce the Acid

Sick stomachs, sour stomachs and indigestion usually mean excess acid. The stomach nerves are over-stimulated. Too much acid causes the stomach to become sour. Phillips' Milk of Magnesia kills acid instantly. The best form is Phillips' Milk of Magnesia, because it harnesses tasteless doses neutralizes acids in its volume as acid. Since its invention, 10 years ago, it has remained the standard with physicians everywhere.

Take a spoonful in water and your unhappy condition will probably end in five minutes. Then you will always feel better. You will be able to eat more. Your appetite will return. These methods will never appeal to you. Go prove this for your own sake. It may save a great many disagreeable hours. Be sure to get the genuine Phillips' Milk of Magnesia, recommended by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any druggist.

Smoking forests or smoking chimneys— WHICH ?

WE CAN'T HAVE BOTH

Over one-half of all Canada's industries depend on wood as a raw material. When the forests are destroyed mills must close down, railway earnings must suffer, trade must stagnate and prosperity must vanish.

Issued by authority of
Honorable Charles Stewart,
Minister of the Interior.

HELP SAVE YOUR FORESTS

PREVENT FOREST FIRES

United States Interested in Canada Trade

New indications that the administration at Washington is working to prevent tariff complications between the U.S. and Canada were afforded this week when it became known the state department is not only giving attention to Canadian protests against increases of rates, but is seeking to line up senators against the house rates on stocker and feeder cattle in which Canadian livestock interests are greatly concerned.

Secretary of State Stimson has taken the subject up with some of the western senators and is understood to be seeking to avoid any action which might interfere with trade with Canada and to avoid the increased rates on cattle as especially important in this connection. This reflects a similar attitude on the part of the president, who is also concerned over the house rates on butter and dairy products.

With the American Farm Bureau Federation pressing for higher rates on cattle and some dairy products than the house rates and many of the western senators backing it up, it is difficult to see how a clash between western agricultural senators and the administration can be avoided. Meantime, Democratic senators are demanding that the protests of other countries, including Canada, be laid before the full membership of the finance committee and made public.

Fire Loss Heavy in Alberta

Alberta stood highest among the provinces of Canada with a per capita loss of \$5.74 caused by fires during the year 1928 according to figures compiled by the Dominion Fire Commission. The total fire loss in the Dominion during the year is given as \$102,697,849.

Banff Car Samersaults Over Bank

Banff, July 5—Wesley Key of Banff is in the Florence Nightingale nursing home here with severe internal injuries and Louis Nurcombe, also of Banff, but whose parents reside in Calgary, is in the same institution with an almost severed ear, as a result of an accident that happened late Tuesday night when the car in which they were riding ran over the bank opposite the Castle Mountain bungalow camp.

Scott Ashley, the third member of the party had a miraculous escape. The three men were returning to Banff and it is said that when almost at the curve opposite the bungalow camp, Nurcombe, who was driving turned to make some remark to Ashley, in the rear seat, with the consequence that instead of turning the curve the car ran right on and over the bank, somersaulting three times and coming to rest about thirty-five feet down.

Wesley Key at one time resided south of Chinook.

Will Eliminate Dangerous Level Crossings

The contribution of some \$13,227 from the railway grade crossing fund as part of the cost of diverting certain roads in the northern section of the province and eliminating ten level crossings was authorized by the board of railways commissioners in session at Edmonton last week. This amount represents 40 per cent of the estimated cost of these diversions, the remaining portion of the cost being borne by the Alberta department of public works. Dangerous level crossings will thus be avoided on the Edmonton-Lloydminster highway near Chipman, on the Westaskiwin-Hayter road west of Camrose, on the Edmonton-Wainwright highway near Bretona and Fort Saskatchewan and a diversion will escape two crossings on the Wiliington-Strathcona line.

Alberta Health Officials Honored

Magistrate Emily Murphy of Edmonton; Hon Geo. Headley, minister; Dr. M. R. Bow, deputy minister of health, and Dr Harold Orr of Edmonton, have been elected officers of the Canadian Social Hygiene Council at a recent meeting of this organization held in Montreal.
